## Soft Computing Techniques for Engineering Design

2011년 01월 21일 인쇄

2011년 01월 31일 발행

발행처 : KAIST

발행인 : Hyun Myung, Ph.D. 외 6명

편집 : Hyun Myung, Ph.D.

인쇄 :  ARC 출판사 이사 TEL. 042)321-5544

ISBN : 978-89-959975-0-5 (비매품)

# CONTENTS

CHAPTER 1	Overview.....	1
1.1	Introduction.....	1
1.1.1	Definitions.....	1
1.1.2	Biological Basis of Neural Networks.....	3
1.1.3	Application Areas.....	6
CHAPTER 2	Review of Computational Intelligence.....	9
2.1	Adaptation.....	9
2.1.1	Adaptation.....	9
2.1.2	System Adaptation Methodologies.....	10
2.2	History of Computational Intelligence.....	12
2.2.1	Historical View of Computational Intelligence.....	12
2.2.2	Artificial Intelligence vs. Computational Intelligence.....	15
CHAPTER 3	Evolutionary Computation.....	17
3.1	Overview of Evolutionary Computation.....	17
3.1.1	History of Evolutionary Computation.....	19
3.1.2	Generic EC Procedure.....	21
3.2	Implementations.....	21
3.2.1	Genetic Algorithms (GA).....	21
3.2.2	Evolutionary Programming (EP).....	30

3.2.3	Evolution Strategies (ES).....	32
CHAPTER 4	Artificial Neural Networks .....	37
4.1	Introduction .....	37
4.2	Different Nonlinearly Separable Problems .....	37
4.3	Multilayer Error Correction Adaptation.....	38
4.4	Components Affecting Back-Propagation.....	40
4.5	Radial Basis Functions (RBFs).....	42
CHAPTER 5	Fuzzy Systems .....	45
5.1	Introduction .....	45
5.2	Fuzzy Inference System .....	46
5.2.1	Fuzzy set membership functions.....	46
5.2.2	Fuzzy relations and operators .....	47
5.2.3	Fuzzification .....	48
5.2.4	Rule base – Mamdani models.....	48
5.2.5	Firing the fuzzy rules.....	49
5.2.6	Defuzzification.....	49
5.3	Takagi-Sugeno Models (T-S models).....	50
5.3.1	Takagi-Sugeno General Form.....	51
5.3.2	Calculating System Output .....	51
5.3.3	T-S Simple Example .....	52
5.3.4	Advantage of T-S models.....	52

5.4	Adaptive Neuro-Fuzzy Inference System (ANFIS) .....	53
5.4.1	ANFIS Learning .....	53
CHAPTER 6	Applications of CI to U-City .....	55
6.1	Structural Control.....	55
6.1.1	Introduction.....	55
6.1.2	Structural Control Algorithms .....	56
6.1.3	Simulation Results .....	59
6.2	Traveling Salesperson Problem (TSP) .....	60
6.2.1	Survey of Algorithms for TSP .....	60
6.2.2	Comparisons of Algorithms Solving TSP.....	62
6.3	Urban and Transport Planning .....	67
6.3.1	Example 1: Transport Planning.....	67
6.3.2	Example 2: Urban Traffic Optimization .....	69
6.3.3	Example 3: Optimizing Urban Energy Flows.....	72
6.4	Structural Design Optimization.....	74
6.4.1	Structural Optimization Benchmark Problem.....	74
6.4.2	Evolutionary Structural Optimization (ESO).....	76
CHAPTER 7	Experiments of CI.....	83
7.1	Line Tracer Robot.....	83
7.1.1	Introduction.....	83
7.1.2	Line Tracer Robot .....	83
7.1.3	Implementation of Fuzzy Control system.....	88

7.2	Traveling Salesperson Problem.....	91
7.2.1	Case Study #1: Subgroup Displacement Operator.....	91
7.2.2	Case Study #2: Mix and Match.....	94
	Index .....	101

# Preface

This book was provided to teach soft computing techniques for U(Ubiquitous)-City Program graduate students. Since the most of the U-City Program students are majored in civil, environmental, and architectural engineering, I thought that it would be beneficial for them to learn about the state of the art signal processing, pattern recognition, data handling, optimization techniques, and for that purpose the introduction to the soft computing or computational intelligence (CI) would be the best choice.

The most of the content was excerpted and summarized from the book *Computational Intelligence: Concepts to Implementations* co-authored by R. Eberhart and Y. Shi (Morgan Kaufman, 2007), and some part of the content were from *Soft Computing and Intelligent Systems Design: Theory, Tools and Applications* co-authored by F. Karray and C. Silva (Addision-Wesley, 2004), and some examples were taken from *Numerical Optimization Techniques for Engineering Design* written by G. N. Vanderplaats (McGraw-Hill Book Company, 1984).

In Chapters 1 and 2, the overview of soft computing is discussed, and the Chapter 3 through 5 deals with fundamental three components of CI: evolutionary computation (EC) in Chapter 3, neural networks (NN) in Chapter 4, and fuzzy logic (FL) in Chapter 5, respectively. In Chapter 6, applications of CI to U-City such as structural control, urban and transport planning, architectural design will be discussed using the up to date literature survey. Chapter 7 will deal with two hands-on experiments using CI. These experiments were actually performed in the spring semester class in 2010. In the first experiment, a line tracing robot installed with a microprocessor is built and CI algorithms are implemented and run on-board. In the other experiment, TSP (traveling salesperson problem) is solved

# Soft Computing Techniques for Engineering Design

Beta Edition

Hyun Myung · Seungmok Lee · Donghwa Lee · Jongdae Jung  
Haemin Jeon · Donghoon Kim · Seonghan Choi

This book was provided to teach soft computing techniques for U(Ubiquitous)-City Program graduate students. It would be beneficial for U-City Program students to learn about the state of the art signal processing, pattern recognition, data handling, optimization techniques, and for that purpose the introduction to the soft computing or computational intelligence (CI) would be the best choice. Lecture materials are available in the website <http://urobot.kaist.ac.kr>.

- 1 Overview
- 2 Review of Computational Intelligence
- 3 Evolutionary Computation
- 4 Artificial Neural Networks
- 5 Fuzzy Systems
- 6 Applications of CI to U-City
- 7 Experiments of CI

This work was financially supported by Korea Minister of Ministry of Land, Transport and Maritime Affairs(MLTM) as 「U-City Master and Doctor Course Grant Program」.
